

Great Job Team J&L!

Dear J&L,

In regards to the Blatnik Bridge project, MnDOT District One was very pleased with J&L's skill, performance and professionalism in completing the needed structural steel repairs and electrical work on the I-535 Blatnik Bridge. This was a challenging project due to the fracture critical nature of the bridge which the J&L project team respected by keeping public safety foremost in mind while the needed steel repairs and member strengthening was done. With the new, enhanced LED lighting system, the Blatnik Bridge will continue to be a landmark structure serving the cities of Duluth, MN and Superior, WI for years to come.

Sincerely,

Brian Larson
